Fix <ul style="list-style-type: none">o Excel file upload was fixed and configurations on production were changed.o Issue with event location that wasn’t updated when importing IFTSTA template was fixed.o Mapping of Planned Time of Departure From/To was fixed.o Issue with order of multiple loads for TO not being recognized correctly was fixed.o Issue with requested values at TO level not being updated was fixed.o Issue with various error messages occurring on time slot allocation view on production was fixed.o Dash for entering plate numbers in InTrack Web and Gate App was fixed.o Minor adjustments to time slot allocation menu in dock calendar.o Minor adjustments to new API V3 implementation.o Issue with menu bar that is not shown after approving data protection notice was fixed.o Issue with role not being assigned and user not being saved was fixed.o Loading indicator disappears only after all requests are done processing.
	 Pairing App New <ul style="list-style-type: none">o Pairing App is able to pair new GS RFID Tags with new label (TA-Schein) and create an EPCIS event, which will be sent to the SAP system.
	 ASN App New <ul style="list-style-type: none">o ASN user can create a bug report if something went wrong and sent it automatically to InTrack WEB and via email to support administrators. Fix <ul style="list-style-type: none">o Bug fix: Change Supplier – PIN Code Problem.
	 Driver App New <ul style="list-style-type: none">o Push notification to change settings for better GPS transmission accuracy - Better tracking of truck with the Driver App for Huawei devices.

XMS App Change

- Improved inbound check process in order to release truck when unloaded but not all HUs are deposited, as well as having truck to wait until all HUs are loaded during outbound. In either cases, a tile of ULI in Inbound/Outbound check view should be visible until all HUs are deposited or loaded. If specific HU does not fit on truck during outbound check, all HUs of according TO have to be unloaded again.

Fix

- Issue with Inbound/Outbound view and only show ULIs in state ARRIVED_AT_DOCK was fixed.
 - Minor adjustments to new view in apps for selecting hub and compartment and dock.
 - Issue with 500 error message in Inbound/Outbound tile when no ULIs in state ARRIVED_AT_DOCK was fixed.
-

Gate App Fix

- Issue with plate numbers cannot be set during registration for TMS ULIs was fixed.
 - Minor adjustments to new view in apps for selecting hub and compartment and dock.
 - Minor adjustments to security check alarm.
 - Issue with resource not found error for language properties in security check process was fixed.
-

Dock App Fix

- Issue with generating ULI registrations & initial ULI status for incoming IFCSUM updates was fixed.
- Minor adjustments to new view in apps for selecting hub and compartment and dock.
